

Jenkins + Snyk Recovery Guide (AWS EC2 + EBS Snapshot)

This guide explains how to restore a Jenkins server from an EBS snapshot and verify Snyk + Terraform pipeline functionality.

1. Attach EBS Volume
 - Go to EC2 → Volumes
 - Select snapshot volume
 - Attach to instance as /dev/xvdf
2. Identify Device
 - Run:
lsblk
 - Look for:
nvme1n1 → snapshot volume
3. Mount Volume
 - sudo mkdir /jenkins-old
 - sudo mount /dev/nvme1n1p1 /jenkins-old
4. Verify Jenkins Data
 - ls -la /jenkins-old/var/lib/jenkins
 - Ensure:
jobs/
plugins/
credentials.xml
config.xml
5. Stop Jenkins
 - sudo systemctl stop jenkins
6. Restore Jenkins Data
 - sudo rm -rf /var/lib/jenkins/*
 - sudo cp -r /jenkins-old/var/lib/jenkins/* /var/lib/jenkins/
7. Fix Permissions
 - sudo chown -R jenkins:jenkins /var/lib/jenkins
8. Start Jenkins
 - sudo systemctl start jenkins
9. Access Jenkins
 - http://<your-ip>:8080
10. Validate Pipeline
 - Snyk scan runs
 - Terraform init runs
 - Terraform plan runs
 - Build = SUCCESS

Troubleshooting:

Check logs:
sudo journalctl -u jenkins -n 50

Check Java version:
java -version

Install Java 21 if needed:
sudo dnf install -y java-21-amazon-corretto
